

Nathan A. Fox is Professor of Human Development at the University of Maryland, College Park. He completed his undergraduate degree at Williams College and his doctorate at Harvard University. His interests are in the biological bases of individual differences in infant temperament and the role of early experience as it affects brain and behavior in the realm of social and emotional competencies. His research has been continuously funded for the past 20 years by the National Institutes of Child Health and Human Development (NICHD) and he received a MERIT award from the National Institutes of Health (NIH) for his work on infant temperament. He currently receives funding from the National Institute of Mental Health (NIMH) for work on temperament and psychopathology, and for a study examining the effects of early social learning in infants. He is a member of the Early Experience and Brain Development research network that is sponsored by the John D. and Catherine T. MacArthur Foundation. Through this network he is one of three co Principal Investigators of the Bucharest Early Intervention Project, involved in studying the effects of institutionalization on cognitive, social and emotional development in infants and young children in Romania. He is the author of over 100 empirical papers and 40 chapters in edited volumes. He served as Associate Editor of the journal *Psychophysiology* (1987-1990) and as Associate Editor of the journal *Developmental Psychology* (1992-1998) and was Editor of the journal *Infant Behavior and Development* (1997-1999). He is currently Associate Editor of the *International Journal of Behavioral Development*. He is past President of Division 7 of the American Psychological Association and of the International Society for Infant Studies and serves as chair of the Publications Committee for the infancy society. He recently received the Distinguished Investigator Award from the National Association for Research in Schizophrenia, Anxiety and Depression (2007).
